Matteo Barzaghi

Senior QA Automation Engineer · Test Automation · Performance Testing · CI/CD

Milan, Italy | matteo.barzaghi91@gmail.com | LinkedIn

PROFILE

Senior QA Automation Engineer with 8+ years in enterprise environments (banking, energy, insurance, luxury retail). I design and maintain test automation frameworks in Java with Selenium WebDriver and Cucumber (BDD/Gherkin), integrated into CI/CD pipelines (Jenkins, GitHub Actions). Experienced in performance and load testing with JMeter and LoadRunner, including real-time systems with long-lived WebSocket connections, API testing with Postman, Agile/Scrum teams and mentoring junior team members.

TECHNICAL SKILLS

Test Automation	Java, Selenium WebDriver, Cucumber, BDD/Gherkin, Test Automation Framework, Tosca
Performance Testing	JMeter, LoadRunner, VuGen, Groovy/JSR223, WebSocket (WSS), Load & Stress Testing, Distributed Load Testing, Bottleneck Analysis
CI/CD & Cloud	Jenkins, GitHub Actions, Git, GCP, Linux, Bash, Linux Network Tuning (sysctl)
API & Database	REST API Testing, Postman, JWT, SQL
QA Process	Test Strategy, Test Planning, Regression & Integration Testing, Defect Management, STLC
Tools & Methods	JIRA, TestRail, Salesforce, Agile/Scrum

EXPERIENCE

Accenture — Senior QA Automation Engineer 07/2021 – present

Clients: a leading Italian banking group, energy and insurance groups, an electronics multinational, a luxury fashion brand.

- Development and maintenance of test automation suites in Java (Selenium WebDriver, Cucumber BDD) for enterprise web applications in banking.
- Integration of tests into CI/CD pipelines (Jenkins, GitHub Actions) for continuous regression testing and more stable releases.
- Performance and load testing with JMeter and LoadRunner/VuGen for energy, insurance and electronics clients (including on GCP): bottleneck analysis and reporting.
- System, integration and regression testing, including on Linux VM environments; defect lifecycle management in JIRA through to resolution.
- Collaboration with Dev and DevOps teams in Agile/Scrum; mentoring of junior QA engineers.

NTT Data — QA Tester 2018 – 04/2021

- Manual, integration and system testing on Salesforce platforms, covering the full STLC.
- Test data preparation, test suite execution and defect tracking in close contact with the client.

PROJECTS

WebSocket push notification load test — JMeter, Groovy, Bash GitHub

Client project, anonymised and published as a portfolio piece: push notifications to payment and field terminals connected over WSS.

- JMeter 5.6.3 test plan where each thread simulates a terminal: WSS connection, JWT authentication (AUTH/AUTH_OK), PING/PONG keep-alive.
- End-to-end flow: commands sent via HTTP POST and verification that the push reaches the right terminal, with POST→WAKE latency measurement.
- Per-terminal state machine in Groovy (JSR223), counters shared across threads, automatic pass/fail on a lost-message threshold.
- Parametric load profile (ramp-up, steps, plateaus, reconnection), non-GUI execution distributed across multiple injectors with HTML dashboard.
- Bash scripts tuning Linux injectors for thousands of concurrent connections (file descriptors, ephemeral ports, TIME_WAIT, conntrack, socket buffers) and idempotent VM setup.
- External configuration with no credentials in code; secret scanning with gitleaks before publishing.

CERTIFICATIONS & EDUCATION

Certifications	Tricentis Tosca Automation Specialist I & II
Education	Master's Degree (Laurea Magistrale) in Environmental & Food Economics Bachelor's Degree (Laurea Triennale) in Political Science — Università degli Studi di Milano

LANGUAGES

Italian (native) English (fluent)
